

# The Windows Advisor

Alphabetical Keyword Index  
Updated: December 2018

The Windows Advisor  
Software Directory  
– from p101

*The Windows Advisor* contains practical and comprehensive solutions for every subject you need help with!

Your tasks and problems are very important to us! That is why the Alphabetical Keyword Index contains keywords for all articles featured in the current Basic Handbook of *The Windows Advisor* as well as from all update issues since 4/2017.

The Alphabetical Keyword Index and Subject Overview are sent to you with every third update. Each time a new Index arrives, replace your old Keyword Index with the new one to always keep up to date. However, we do recommend that you keep the last Index from each year, so that if you cannot find what you are looking for in the new Keyword Index, you can refer back to an older Keyword Index.

Tip: you will also find the Keyword Index in the Articles section of our website. Go to [www.windowsadvisor.co.uk](http://www.windowsadvisor.co.uk) and then click on Articles and you can download the Keyword Index by clicking the link at the top of the page.

## **Total control – how to find practical solutions in your *Windows Advisor*:**

It's really easy to look for articles in *The Windows Advisor*. The Subject Overview on page 85 gives you a complete overview of all of the articles in the Basic Handbook as well as from all update issues since 4/2017. You will quickly and easily be able to find the exact article you are looking for thanks to the simple structure of the Subject Overview.

The Alphabetical Keyword Index from page 87 lists the most important keywords that are covered in each article. For example, if you would like to find more information concerning drivers, you will find multiple references under D 411, I 510 and W 731 – these article numbers refer to the article where you can find the information in *The Windows Advisor* manual.

Tip: you should also keep the updated Subject Highlights sheets, as these provide you with additional help in finding the best articles in your *Windows Advisor*.

Here's just a glimpse of some of the articles that make *The Windows Advisor* an invaluable tool for you:

# Highlights from the Windows Advisor

---

## Highlights for Windows 10

- **W 312 Windows 10: Top Free Apps from the Store.** The Microsoft Store app allows you to browse through thousands of items (although not everything at the Store is worth having!) of software for your PC – many of them free – and install anything you fancy quickly and safely. In this article you will discover the benefits of choosing your software from the Microsoft Store, how to install Store apps easily and safely and our roundup of the best free apps for Windows 10.
- **W 725 - Windows 10: Network Problems Diagnostics.** There are lots of things that can go wrong with a home network, since it depends on multiple components: the physical connection, the protocols that are required for the connection to work and their correct configuration, as well as security layers like a firewall. All of this complexity makes looking for an error extremely difficult. With the steps in this article, you'll be able to track down and resolve network problems in minutes.
- **W 726 - Windows 10: Optimal Configuration.** When you install Windows 10, Microsoft configures the operating system with the default settings. Apart from the fact that the desktop looks boring, Microsoft has set up the operating system with very conservative settings. These make it inconvenient to perform some tasks, and they can also slow down your computer's speed. Follow the steps in this article to correct the problems and give your system a performance boost.
- **W 730 - Windows 10: The Best Free Apps:** Are you looking for an alternative to Google Maps? Do you miss the old Windows Media Player? Before you launch Google to search for new software, I recommend that you try one of the Apps that are already on your Windows 10 system. Windows 10 comes with an enormous array of Applications and tools integrated in the system. Use these standard Windows 10 Apps and save money on expensive third-party software. Windows 10 comes with very good Mail, Maps and Calendar Apps, and you can easily add third-party Apps from the Store for free. Try out the Apps presented in this article – they won't cost you a penny!
- **W 731 - Windows 10 System Refresh:** If your Windows 10 system constantly crashes, it can quickly become very stressful. You cannot type fast enough to respond to emails before the system crashes, and the unsaved changes to your files are lost. Windows can also take a while to reboot, leaving you to sit looking at a blank screen, which makes the process even more annoying. Usually these crashes happen when you most urgently need access to your computer too. Fortunately Windows has a series of tools that help you resolve these kinds of problem and freshen up your system.
- **W 732 - Windows 10: Solve Creators Update Errors.** At some point, your computer will suddenly re-boot and then nothing will be like it was before. Microsoft automatically installs the new Creators Update on your Windows 10 computer. In the worst case when this happens, Windows will no longer run in a stable way. That's

# Highlights from the Windows Advisor

---

because Microsoft is actually providing in effect a new Windows version. Read this article to discover how to solve nasty errors during or following the installation of the new Windows 10 Creators Update.

- **W 738 - Windows 10 Update Repair Steps.** Sometimes Windows 10 users encounter real dilemmas: you have discovered a error on Windows 10 which is apparently solved with the next update – but Windows blocks any attempts to install the update. When this happens, many experts recommend a new installation. But there is another way: you can perform an in-place upgrade installation to install the latest Windows 10 version in about 30 minutes and have a running system at your disposal. In this article, I'll show you how to apply the in-place upgrade and what you have to look out for.

## Highlights for Windows 8.1/8

- **W 361 - Windows Refresh to Cure Problems:** If your Windows 8.1/10 system is slowing down, the boot process seems to take forever and basic operations run very slowly, then re-installing Windows from scratch will often help. The problem is that the process takes a lot of time and you'll lose all of your data and programs, which you'll need to restore from a backup. Sometimes, only a refresh will help you. By refreshing Windows, it will become as fast as it was on the first day you got it.

## Highlights for All Windows Users

- **B 8 – Backup: Ultimate Guide to Securing Essential Data.** PCs are at best unreliable, meaning that you can easily lose important data due to a defective component or a damaged hard drive. It is essential that you keep regular backups of your data – we'll show you how in this article.
- **C 6 – Configuration: 7 Essential Steps to Optimise Your PC.** Out-of-the-box, Windows won't take advantage of the full power of your PC's hardware. That's why you need to follow our 7 essential steps to run your important applications at high priority, disable unnecessary services and speed-up Windows startup.
- **D 411 - Device and Resource Management on Windows.** The Device Manager is the central place to control your hardware devices and settings on all Windows versions, including Windows 10. You can view and change all the settings, resources and drivers associated with your hardware devices from the Device Manager. In this article, we'll show you which Device Manager settings you need to tune and how to use the tool to find errors on your system.
- **E 300 - Encryption in the Cloud:** Online services such as Microsoft's OneDrive, Dropbox or Google Drive are booming in popularity. You can use them to store your documents, photos and other files, which are saved in the cloud and available from anywhere in the world over the Internet. It is important not to forget about protecting

## Highlights from the Windows Advisor

---

your data while it is stored in the cloud. An unsecure connection could theoretically mean that anyone is able to read your data. Data should only be transferred if you use an encrypted connection. In this article, I'll show you how to set that up and how you can keep your valuable data protected.

- **E 801 - Explorer: Keep Folders Under Control:** Explorer is one of the most important programs on Windows. It is the main interface you use to browse and organise your files and folders and even execute applications, meaning that it is much more than just a file management tool. Explorer runs right at the heart of Windows, meaning that problems in Explorer can quickly affect the whole of your operating system. However, Explorer is far from perfect and has many clumsy and difficult to use features. In this article, we'll show you how to turn Explorer into what it actually should be: a powerful and extremely useful system program – just by applying a few easy changes.
- **I 510 - Intel Security Gaps Solved.** A serious flaw has been found in computers that have Intel processors and other Intel compatible CPUs. The security bug can be exploited at any time by malware code designed to take advantage of the Meltdown and Spectre bugs. These bugs put your data and passwords in grave danger. The Meltdown and Spectre exploits take advantage of this process and bugs in the design of the processor to seriously compromise your security. Intel and other hardware manufacturers are working tirelessly with Microsoft to come up with fixes to these problems. I'll show you the steps you need to take to protect yourself in this article.
- **S 491 - Secure Browsing with the Correct Configuration.** Your web browser is the application you probably use most on your PC, but it is also the one that is most at risk. That is why it is so important to take steps to configure your browser's security settings to protect your PC from coming to harm. The vast majority of malware infections arrive via hijacked or fake websites, since Windows Firewall has blocked most of the other routes hackers used to take to infect PCs. This means that it has never been more important to secure your web browser against attacks. All the latest web browsers come with a raft of security features to help you do that but it is important to take the time to configure the features correctly. Follow the steps in this article for a perfectly configured web browser and enhanced online security.
- **T 996 - Typing Trouble: Solve Common Keyboard Problems.** The keyboard has been with us as long as the computer itself, and apart from the addition of a few keys, it's barely changed. It's tried and tested, and absurdly simple. So what could possibly go wrong? Well, quite a lot as it turns out! Don't worry, with our article you will soon be able to fix annoying problems with your keyboard in simple steps. Find out why your keyboard is producing the wrong characters, how to stop repeated key presses and ACCIDENTAL CAPITALS, as well as how to salvage text you've lost by accident.
